

Experiment C: 3-neuron negative loop ($A \rightarrow D \rightarrow I \rightarrow A$) closed-form lenses

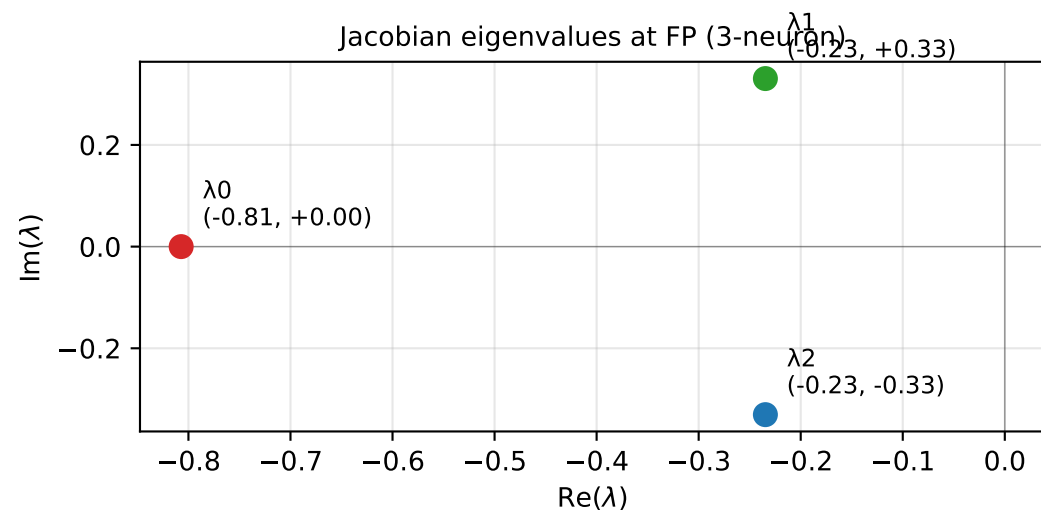

FCS oracle (3-neuron, default weights): period of A = 6

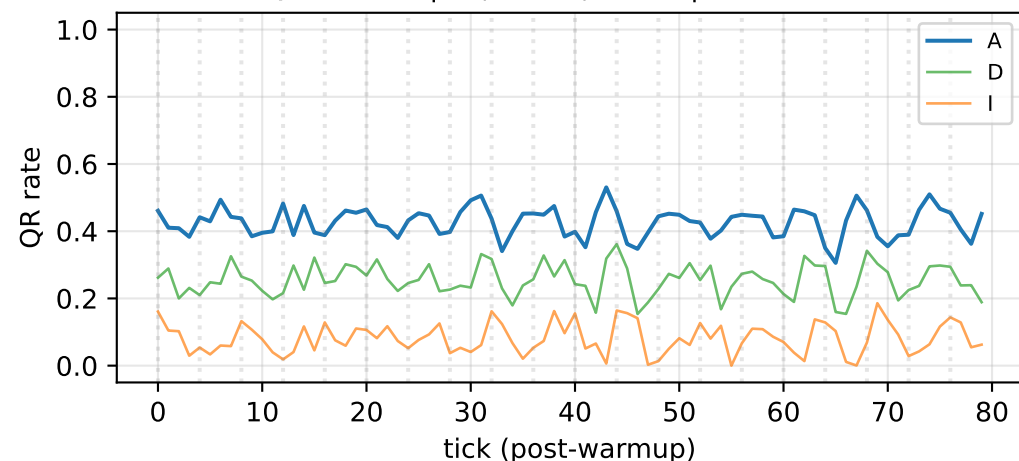

Period vs w_{IA} sweep (3-neuron negative loop, $w_{AD}=w_{DI}=11$)

Jacobian eigenvalues at FP (3-neuron)

QR mesoscopic (N=500): A FFT period = 6.38

Period predictions: 2-neuron vs 3-neuron negative loop
